Pilot PC

- Solar tracking using a dedicated PC
- Solar Groups are shades with common solar properties and identify how will control them.
- Building plans are imported into "Pilot" system – locating the building site on the globe and the building itself relative to the compass (e.g.: south elevation faces 180°)
- Time and date for "Pilot" are taken from the PC
- A single weather station updates sun information on a real time basis so that current weather data is used to control the shades
- All shades can be controlled manually from "Pilot" or from a local RP control.
- Four security login levels of users can be administered

Showroom:
2075 Byberry Road
The Atrium, Suite 108
Bensalem, PA 19020

Factory:
111 Buck Road
Unit #900
Huntingdon Valley, PA 19006
